BAPAURA in a nutshell

BAPAURA is a European project aiming at developing a public building energy renovation support service for small municipalities in the French Region of Auvergne-Rhône-Alpes. This project is fruit of multiple months of cooperation between the French Agency for Ecological Transition, ADEME, the Regional Agency for Energy and Environment, AURA-EE and 9 local energy renovation stakeholders.

The core objective of BAPAURA is to support Energy Efficiency (EE) investment in 115 public building striggering a total of EUR 23.6 million investment.

➔ From 1 September, 2020 to 31 August, 2023
➔ Total budget: 1 475 594 €
➔ In the French Region of Auvergne-Rhône-Alpes

How it works?

**Two level of actions:**

➔ An energy renovation support service by the territorial partners. They will provide, share and build on their energy performance and financial engineering expertise with the aim to see through the project’s energy refurbishment projects and help others do likewise.

➔ A regional facilitation carried by ADEME and AURA-EE to align the objectives of the regional toolbox with the National and European standards and ambitions.

Main objectives

➔ Developing advanced and centralized energy services dedicated to small and mid-size municipalities focusing on project development assistance (legal, technical and financial).

➔ Providing these services at department level through 9 existing local energy support structures that will introduce ‘one-stop shop’ services.

Tangible investment over 3 years

The European Union financed the project with the condition to invest **23 627 000 €** in the refurbishment of a set of public buildings within the partner’s built stock by the end of the project.

BAPAURA consortium is composed of organizations that are involved in energy investment planning at regional and local levels:

➔ 2 partners at regional level to coordinate activities:

➔ 9 experimental territories: partners with a diverse background for a targeted support of each territory.
