

START A NEW CHAPTER IN YOUR TRANSITION

Define a trajectory in line with the challenges ahead

TerrISTORY® provides a set of functionalities to simulate scenarios, their socio-economic and environmental impacts, and thereby make informed choices.

Set a course

The goal is to set objectives that meet the medium and long-term challenges of the territory.

Develop an action plan

Based on the main action leverages identified, projects can be prioritised through an iterative process.

Measure the impacts

The interactive interface allows you to simulate the impacts of your action plan and visualise its contribution to the achievement of your territory's transition objectives.

TAKE ON THE CHALLENGE TO-

Get involved in a collective effort

Each territory, while pursuing its own objectives, **contributes to the achievement of more global objectives**, whether regional, national, European or international.

« Data observation is a fundamental issue in the implementation of regional energy and climate policies. The Region, through the deployment of TerriSTORY®, allows all municipalities in Brittany to manage their transition by accessing recent, territorial and harmonised data.

André Crocq, Regional Councillor in charge of the energy transition for the Brittany Region

« TerriSTORY® is a device that will allow Positive Energy Territories to better grasp the reality of their territory, sharpen their decision process and materialise the inter-territorial solidarity through the visualisation of the flows that link them.

Jérôme d'Assigny, Director of Public Affairs at Valobat

This is how TerriSTORY® **creates a community of territories that are committed to collectively** taking up the challenge of transition.

« TerriSTORY® is a regional reference tool for the supervision of regional planning documents and regional strategies. It helps to take matters into our own hands because the transition is not only a matter of experts, but a matter of all those who live in the territories.

Éric Fournier, Regional Advisor, Special Delegate for Air, Climate and Energy

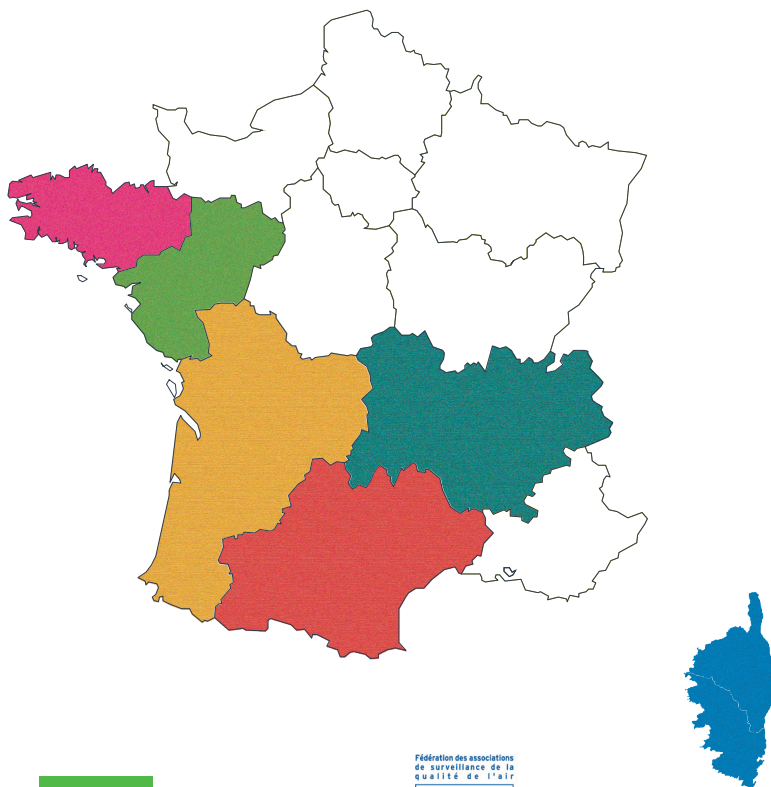

« TerriSTORY® is more than a tool, it is a project to reinvent data governance and territorial support.

Serge Nocodie, 1st Vice President of AURA-EE

TerriSTORY® : A MULTI-REGIONAL PARTNERSHIP INITIATIVE

- ▶ A project carried out by a community of actors with a public service or general interest mission and working at different territorial levels.
- ▶ A tool co-constructed with the territories.

With the support of :

A FREE WEBSITE ACCESSIBLE TO ALL

TerriSTORY® uses public domain data and multi-sources from the National Institute of Statistics and Economic Research, the National Institute of Geographical and Forestry Information, public sector services, Open data platforms, regional observatories, etc.

- ▶ **Simple to use**, terristory.fr is accessible to all.
- ▶ As a support to territorial facilitation, it provides a pedagogical way to organise dialogue between stakeholders within a territory in a shared territorial project logic.
- ▶ **Ever evolving**, TerriSTORY® is frequently updated with new datasets and new functions.
