**Integrated and Multi-level  
Energy models for the  
Alpine Space**

**Interreg  
Alpine Space**

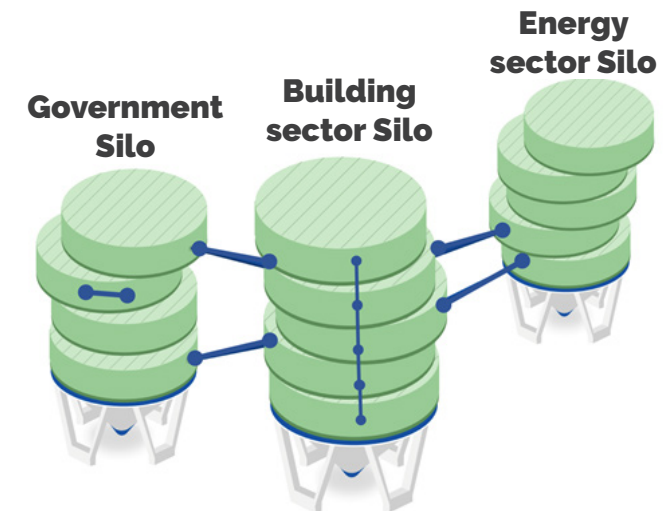

# About the Project

**IMEAS** vision on **multi-dimensional integration goes beyond the classic multi-level governance** known by policy makers and practitioners, let's put it into action together!

Project duration:  
from 01/11/2016 to 30/06/2019

Project partners are working together for an innovative **promotion of the domestic and transnational integration of low-carbon energy policy making and planning in the Alpine Macro Region**, tackling the detrimental - and still very common a "policy silo" problem in low carbon energy policies and planning into the paradigm shift needed by the multi-dimensional approach.

**IMEAS** project will help the Alpine Space macro-region to develop consistent strategies and define its role in the new European Energy Union, contributing to EU "New Energy Deal" calling for better consumers and **stakeholders involvement in the development of the future energy system.**

**IMEAS** aims at creating a **new integrated approach and shared tools** to enhance the ability of Public Administrations, agencies and other institutions to plan integrated and sustainable energy policies and to select the right measures and instruments to implement them.

**IMEAS** will develop policy, governance and communication mechanisms that could really foster a comprehensive and integrated strategy among decision makers for the implementation and verification of policy measures and market mechanisms to attain sound results across different sectors characterized by a great deal of public, private and PPP actors.
